

Craste Secures US Patent for Agricultural Biomass Processing Technology

<https://www.big.venturecenter.co.in/fuma/>

Congratulations!

Congratulations to Craste on securing a US patent for its novel biomass treatment process for pulping and biorefinery applications.

The patented innovation enables agricultural residues such as rice straw to be efficiently converted into pulp and value-added biorefinery products through an advanced recovery and recycling process.

This breakthrough technology has the potential to promote sustainable utilization of agricultural waste, reduce dependence on conventional raw materials, and support the development of a circular bioeconomy.
